**ANNUAL OPERATING BUDGET IMPACT (\$000)** 

## DESCRIPTION

APPROPRIATION AND

Enrollment at Damascus High School currently exceeds capacity, and enrollment is projected to grow significantly beyond capacity during the six-year period. Part of the facility constructed in 1950 has very narrow corridors and does not adequately accommodate the number of students currently in the facility. Substantial bottlenecks occur at major intersections in the building during class changes, and this problem will be exacerbated as enrollment continues to grow.

An amendment to the FY 2001-2006 CIP was approved for corridor circulation improvements at Damascus High School to mitigate the congestion problems in the corridors of the facility. The FY 2002 appropriation was approved for planning and construction. In addition, there is a need to convert existing space adjacent to the corridor improvements into a new science classroom. The above expenditure schedule reflects the change in scope of this project to include the new science classroom.

State aid was approved for the corridor and science classroom improvements. An FY 2004 appropriation was approved for construction funding. This project is scheduled to be completed by September 2004. An FY 2005 transfer of \$750,000 was approved from this project to the Gaithersburg Elementary School addition project. In FY 2005, \$614,000 was reverted to the state.
